

Lesson 08 Demo 04

Creating SQS Standard Queue, Visibility Timeout, and DLQ

Objective: To create and manage an Amazon SQS Standard Queue, emphasizing the concepts of visibility timeout and Dead Letter Queue (DLQ)

Tools required: AWS Management Console

Prerequisites: None

Steps to be followed:

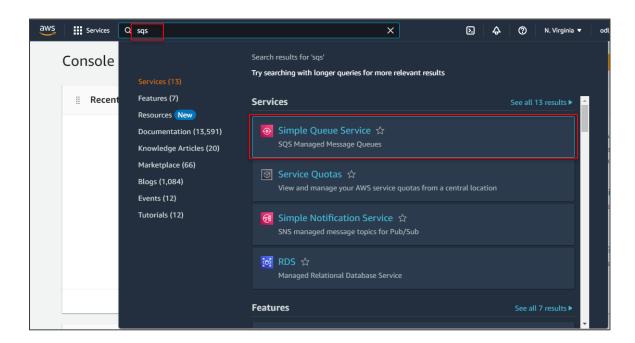

1. Create a standard SQS Queue

2. Send and receive messages

- 3. Create message polling
- 4. Edit visibility timeout
- 5. Create DLQ

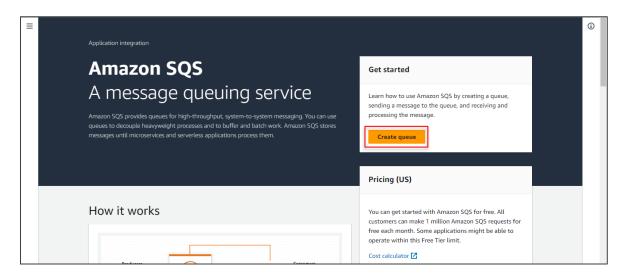

Step 1: Create a Standard SQS Queue

1.1 Navigate to the AWS Management Console, search for sqs and select Simple Queue Service

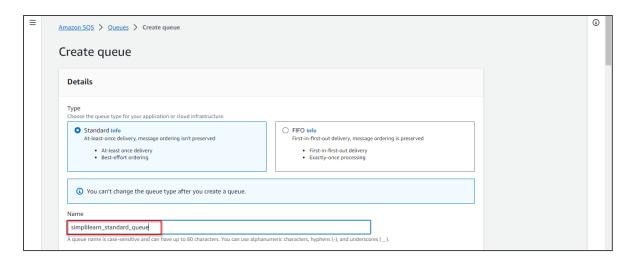

1.2 Click on the Create queue button

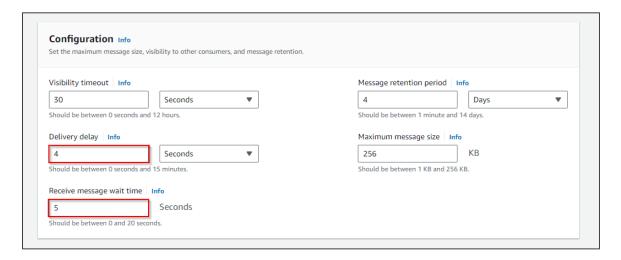

1.3 Name the queue as simplilearn_standard_queue

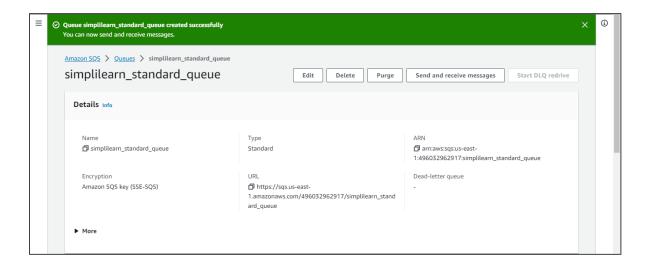

1.4 In the Configuration section, set the **Delivery delay** to **4 Seconds** and the **Receive** message wait time to **5 Seconds**

1.5 Keep the default values, and click on the Create queue button

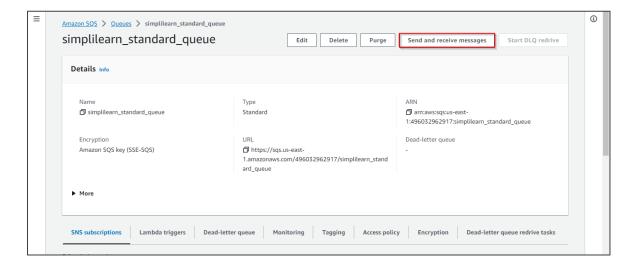

The queue has been created successfully.

Step 2: Send and receive messages

2.1 Navigate to the queue dashboard, and click on the **Send and receive messages** option

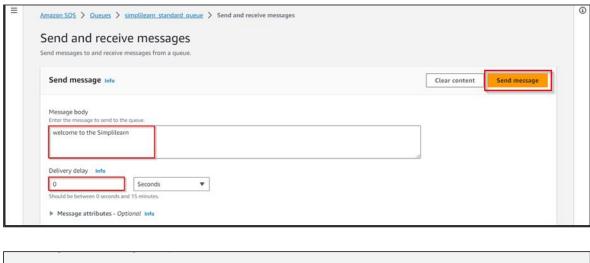

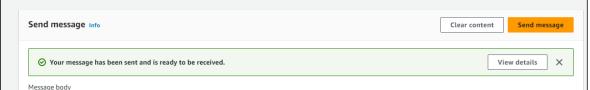

2.2 In the **Send message** section, specify the following values:

Message body: welcome to the Simplilearn

Delivery delay: 0

Click on the Send message

The message is sent successfully.

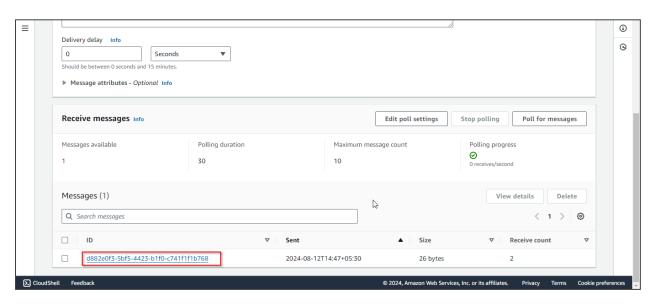

Step 3: Create message polling

3.1 Scroll down and click on the Poll for messages button

3.2 In the **Messages** section, click on the **Message ID** and navigate to the **Body** tab to view the message

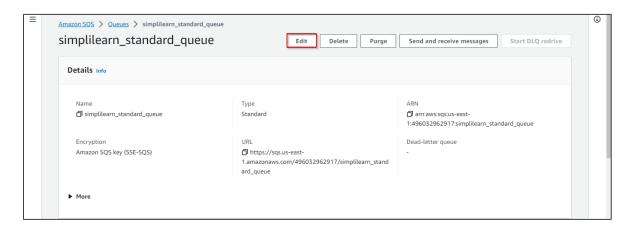

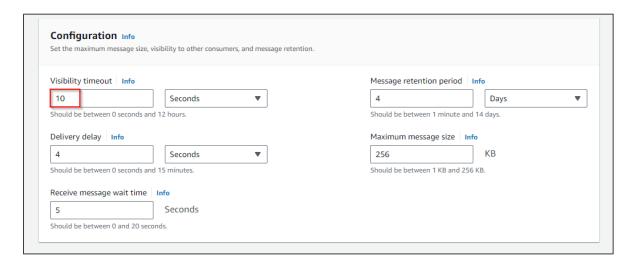

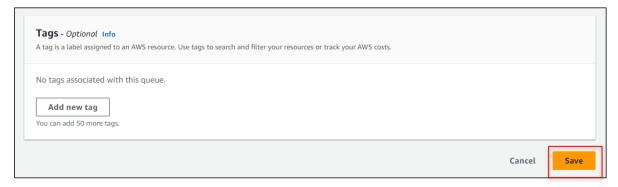

Step 4: Edit visibility timeout

4.1 Select simplilearn_standard_queue and click on Edit

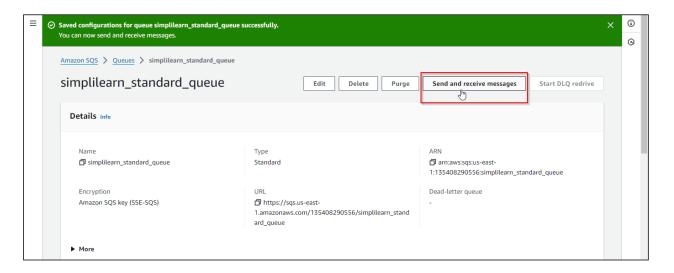

4.2 Set the **Visibility timeout** to **10 Seconds** and click on the **Save** button

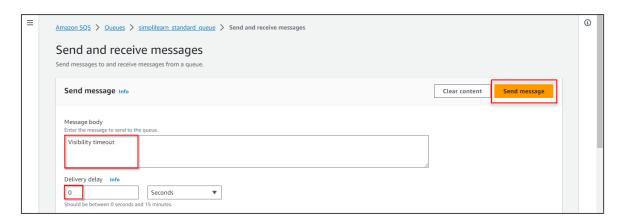

4.3 Click on the Send and receive messages option

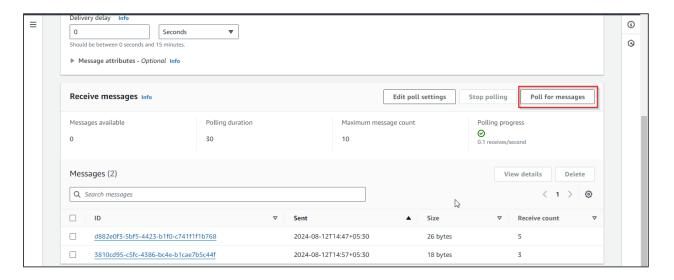

4.2 In the Message body section, enter Visibility timeout, set the Delivery delay to 0 Seconds, and click on the Send message button

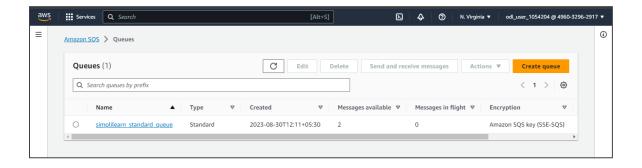

4.3 Click on the Poll for messages option

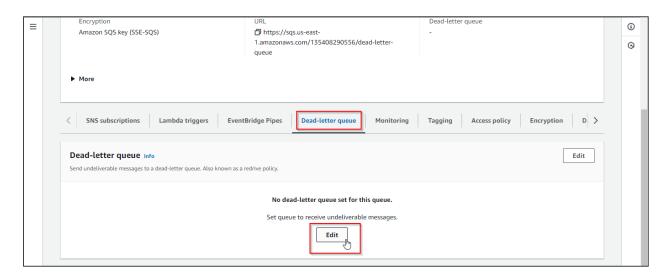

Step 5: Create DLQ

5.1 Create another queue named dead-letter-queue, following the steps from 1.1 to 1.5

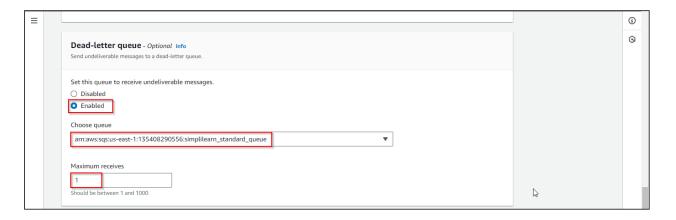

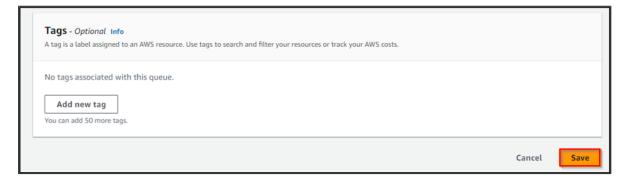

5.2 Navigate to the **Dead-letter-queue** and click on the **Edit** button

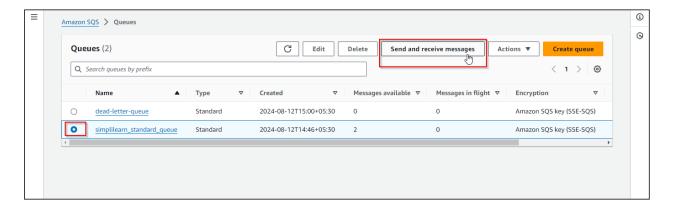

5.3 In the **Dead-letter queue** section, select the **enable** option, choose queue as **ARN**, enter the **ARN** of the dead-letter queue, and set **Maximum receives** to **1** and click on **Save**

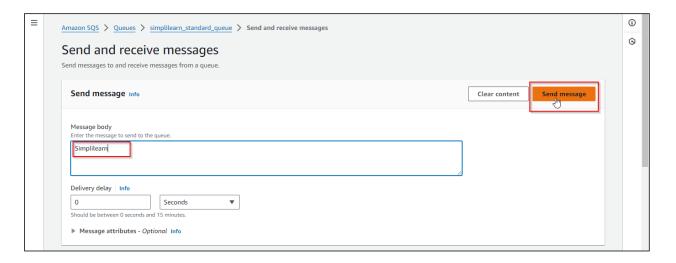

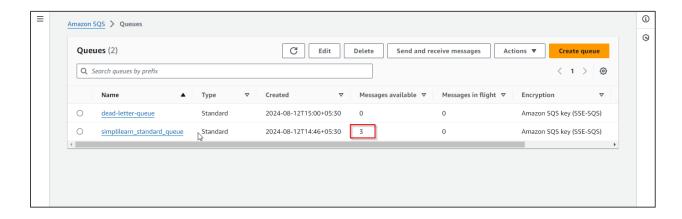

5.4 Select the Simplilearn_Standard_queue option and click on the Send and receive messages button

5.5 In the Message body, enter Simplilearn and click on the Send message button

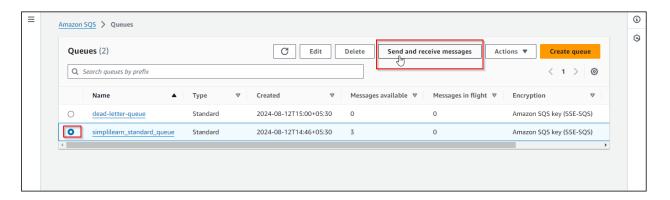

5.6 Navigate back to the Queues page, where the message count is 3

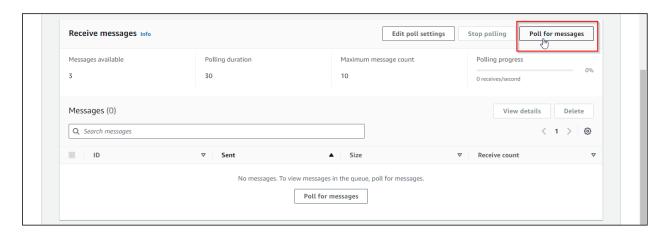

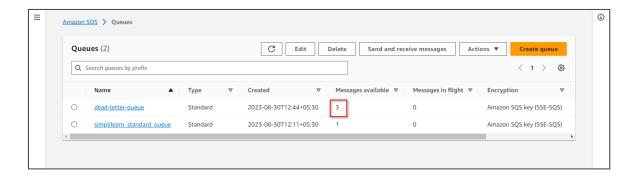

5.7 Select the **simplilearn_standard_queue** option and click on the **Send and receive messages** button

5.8 Click **Poll for messages** to view the message

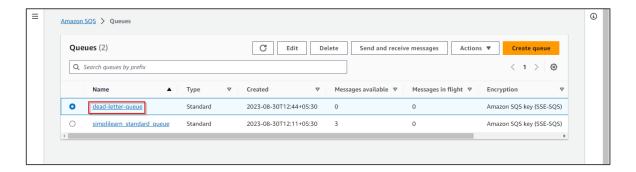

5.9 Return to the **Queues** page and refresh it multiple times to observe messages being moved to the **dead-letter-queue**

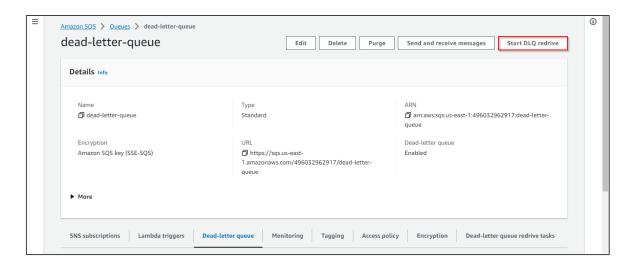

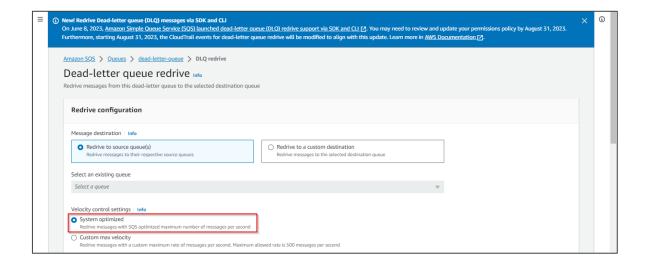

5.10 Click on the dead-letter-queue option

5.11 Click on the Start DLQ redrive button

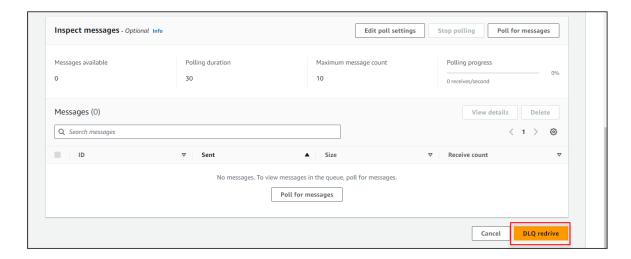

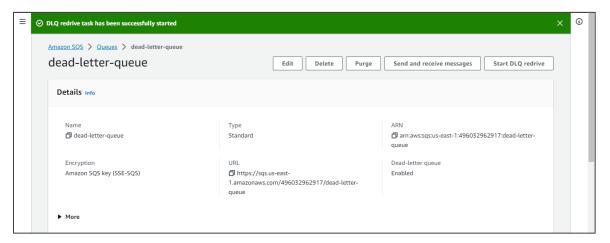

5.12 In the **Velocity control settings**, select the **System optimized** option

5.13 Click on the **DLQ redrive** button

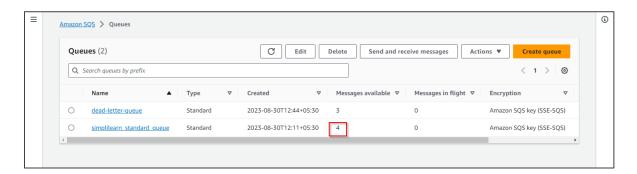

The DLQ redrive has been successfully created.

5.14 Return to the Queues page. The message will be sent to simplilearn_standard_queue.

By following these steps, you have successfully demonstrated the process of working with an Amazon SQS Standard Queue, adjusting visibility timeout, and setting up a Dead Letter Queue for message handling.
